

OPEN DAY AND NIGHT

Our Grade 4/5/6 building was absolutely buzzing yesterday as all of the students from Prep to Grade 6 enjoyed our open day incursion—Planks.

The students were having a ball constructing amazing structures, patterns, dominoes. Little did they know that whilst doing this they were working with quantity, angle, weight and length, the forces of gravity and friction, and were practicing fine motor skills, balance and spatial awareness. This was teamed with essential group work skills such as communication, negotiation, compromise and co-operation. At times resilience was tested when catastrophes happened, and self-control was called on when it was very tempting to just give things a little nudge!

It was fantastic to see many parents join in the fun from 5:30 onwards and share the challenge of creating something from nothing with their children. We had structures literally touching the roof and a couple of our kids fully enclosed in little plank houses. Check out the videos here.
